

GMO

TO WHOM IT MAY CONCERN

Regarding GMO:

Herewith we declare that the products of OVODAN EGG GROUP

- are no products within the meaning of prescription 1829 / 2003 / EG and 1830 / 2003 / EG (GMO)
- do not consist of Genetically Modified Organism (GMO)
- do not contain Genetically Modified Organism (<0,9% corresponding to prescription 1829 / 2003 / EG)

Oftentimes, we are asked about the risk of presence of GM-Material in eggs if the layers maybe had some GM-feed. From an article in German:
<https://www.transgen.de/lebensmittel/292.milch-fleisch-futter-gentechnik-pflanzen-ohne-einfluss.html>
we see, that there is no chance to find GM-Residues in the eggs, and in order to verify this, we check this at least once a year in our analytical monitoring.

For further information, please do not hesitate to contact us.
